

Running Order and Executive Summaries:

Prive Butler – Vishal Sharma & Gorkey Gurcan

Prive Butler is a concierge service which manages your chores & errands. We assign each client a dedicated house manager who visits the client's home once a week to do a tidy-up, and also remotely coordinates a variety of chores & errands, including groceries, dry cleaning and laundry. The client communicates and sets on autopilot all their needs related to chores & errands through an iOS app.

Beacon – Caize Guo & Jiaju Wang

We are building a reviews and recommendation system to help Chinese overseas students select and get better service from education agencies based on our data, algorithm and supervision system.

The Life Accelerator – Hari Verma & Zeeger Scholten

Bringing personal development to young adults through centralized content, community & courses. Join us & be part of the movement.

OpenAFM – José Rodriguez

This is an initiative to make low cost research-grade devices for schools and enthusiasts. We will inspire students, motivate creativity and enable crowd-sourced science. Our first product is an atomic force microscope that enables the characterisation of materials at a nanoscale. Typically in the range of tens of thousands of pounds, our alternative costs less than two hundred pounds.

SnOWs – Krysztof Hockuba & Mirela Yordanova

SnOwS is a wearable device and a mobile app, that helps you find your friends on the slopes and tracks your daily performance. In an emergency, the SOS feature allows you to transmit your location to the local rescue service and your nearest friends.

Guinea Pig Mobile – Victor Dyrnes

A law opening up Peru for MVNOs has just come into force. An MVNO (eg, Giffgaff) is a telecom provider who does not own any infrastructure them self, but instead rents this from a MNO (eg, Telefonica). We will open up a MVNO service provider in Peru by the end of 2016.

FoodieTalk – Fern Phataraprasit

FoodieTalk is a location-based social app, where users can find people to eat with-- to expand their network, share their knowledge and experience. It lets you discover awesome restaurants and amazing people at the same time! FoodieTalk is the result of a collaboration between Natcha (Fern) Phataraprasit and Ravisara (Lilly) Limlahapun, who both have a passion for food. Let's eat together!

Trackener – Pauline Issard

Trackener is developing an intelligent horse monitoring technology. Founded by Pauline Issard and Jeremie Charlet, two engineers passionate about using the new technologies to relieve the stresses of horse owners. Thanks to a hardware and software solution, Trackener provides 24/7 monitoring of a horse's health, and can prevent potential future health problems from occurring.

Thestartup.space – Piere M'Pele

Thestartup.space is a focused multimedia entrepreneurship platform enabling wannabe entrepreneurs between 18-25 to share thoughts, learn more and discover opportunities about entrepreneurship.

< B R E A K >

Kpish – Cony Sepulveda & Claire Berdugo

Kpish exists to solve one problem: the considerable amount of time a woman wastes when selling her clothes online. A particularly time-consuming step of this process is searching for the product information online and entering it manually into forms in order to provide an accurate description and therefore increase the odds of making a sale. Kpish creates a lean online selling process by offering women a tool that automatically records their online purchases from fashion sites directly to one place, ready to be sold.

GoConcierge – Artem Stapoulski & Thanawin Olanrawathana

GoConcierge is an on-demand travel concierge for your phone. It provides an effective and convenient chat interface, 24-hour support and easy ability to make changes. GoConcierge transforms professional travel planning into a one click action.

AppraiseMe – Kit Latham, Ellie Burgess & Shahryar Siri

Appraise Me helps independent doctors maintain their license to practise. We provide a step-by-step online content management and connection service supporting the annual appraisal process. We eliminate stress by quickly connecting doctors with our network of appraisers, and we provide appraisers the opportunity to earn money flexibly through video conferencing.

Go&Park – Alma Perez

Go&Park is an online service, which matches drivers searching for a parking space with homeowners renting their parking spots. Founded by Alma Pérez, a Mexican Industrial Engineer. It provides an effective solution for drivers, initially in Mexican cities. Find your parking space in seconds!

Skillrail – Jack Humphrey

Skill Rail is a community website that empowers university students to become a better version of themselves whilst they study, by providing them access to a range of small freelance jobs they can complete around their studies to improve their employability when they graduate.

BetterCity – Rafael Hernandez

BetterCity is a free mobile and web platform that allows citizens to report issues in their neighbourhoods and communicate them effectively to the local authorities to solve them. The users can see the reported issues in a map inside the app, comment issues, suggest resolutions and add pictures. People can receive notifications and alerts to know about updates of issues based on location or keywords.

aquantX – Niko Forst

aquantX is an innovative web-based platform that supports millennials to stay in charge of their financial future by making confident and well-informed investment decisions at the stock market. Therefore, aquantX provides sophisticated analytics and intuitive presentation of chance/risk indicators and recommends appropriate actions.

Foodesia – Lukas Hughes

We, foodesia, want to build an online market place for London's delicatessens, where you as a customer feel like you are stepping into the physical shop itself. By enabling you to shop across multiple delicatessens, we want to help your local shops reach out to a greater audience of interested shoppers, while relieving them of the stress of managing an online shop and organising deliveries.

Stad-App – Andy Kell

Stad-App, founded by Andrew and Alan Kell, is a mobile application service designed specifically for Sports Stadiums in order to address the current problem faced by spectators when ordering food and drink during live events, i.e., having to queue and miss elements of the live experience. It also aims to boost food and drink sales within stadiums.

WeGeek – Noor Alkhadra

WeGeek is solving the social problem people are facing in the gaming community. We are enabling gamers to socialize by creating a physical space and providing the equipment and atmosphere needed to form social bonds.

Gophr – Gracie Oury

Gopher is everyone's private concierge. We leverage the natural movements of Londoners through the city to carry out errands you just don't have time to deal with, all for the price of a short cab ride. With 107 students currently signed up to work, the platform renders a host of previously undeliverable items mobile (go on, send your friend a cupcake from their favourite bakery in Soho) and creates a new kind of revenue stream for the student who wants it all (income without the inconvenience of shift work, anyone?) Gopher is being developed by Gracie Oury, a molecular biologist and UCL alumnus currently working as a digital producer in the advertising industry.
